

- Entry level automatic dispenser
- Up to 24 canisters of 1.75, 2.5 or 3.5 L
- Patented Blendorama pump
- Manual can table or can shelf
- Floor or bench top model
- Angled nozzles® for non VOC

The TM300 dispenser is our entry model for sequential dispensing and especially designed for small to medium retail operations with limited floor space available. It features our well-known piston pump system (50ml/stroke), centralized automatic bottom stirring and a spyglass to see a board message.

The dispenser is equipped with 12 to 24 molded polymeric easy click canisters of 1.75 and 3.5 liter. Available as bench top or floor model with manual can shelf or adjustable can table. The new improved manual punch and heating set for high viscosity colorants are optional.

It is possible to equip the TM300 dispenser with angled nozzles®; an even better solution to the new critical non VOC colorant systems.
